

Classification Manager (CCM)

Improve reuse and reduce costs with flexible, secure intellectual property (IP) classification and retrieval.

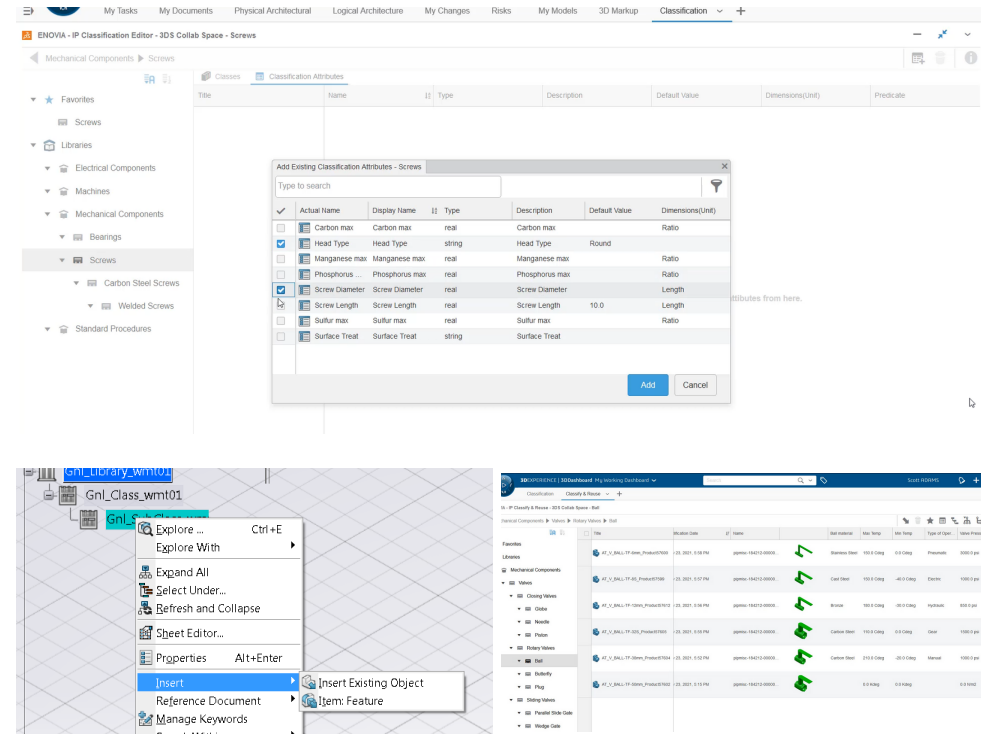

Classification Manager offers powerful, flexible, library classification schemes and features to organize and retrieve Intellectual Property (IP).

Classification Manager provides an easy way to establish and nurture an efficient IP reuse process across the entire organization with the right level of organization and qualification. IP can be classified, with appropriate security, in multiple libraries designed for specific functional groups such as Engineering, Design, Purchasing, and Marketing.

Classification Manager librarians can associate sets of attributes with class hierarchy. Any IP classified in the hierarchy inherits the class attributes, ensuring consistent product definition and specification. As a result, searching is consistent and IP is reused with confidence, reducing development time, cost and risk.

Benefits

- Reduce administration cost and system complexity by consolidating existing IP libraries within the 3DEXPERIENCE platform.
- Promote IP reuse with standardized, enterprise-wide product content using flexible library classification schemes designed for use by functional business disciplines.
- Improve efficiency with multi-library classification. Users can consistently search for IP using library specific or multi-library classification attributes.
- Optimize productivity with embedded access to classified IP content directly from 3DEXPERIENCE platform applications.

Highlights

- Extend IP reuse across the organization with standardized, enterprise-wide product content catalogs, using flexible library classification schemes to fit company requirements.
- Improve efficiency with use-based library classifications where different functional groups can simultaneously organize the same content from the perspective of different disciplines.
- Make more informed decisions with consistent, flexible and comprehensive classification search and compare capabilities.
- Enhance user productivity with embedded access to classified IP content directly from 3DEXPERIENCE platform applications.
