

What is Collaborative Designer?

Collaborative Designer enables a CATIA V5 and a Solidworks user to connect their data in the 3DEXPERIENCE® platform whilst continuing to design in their native environments.

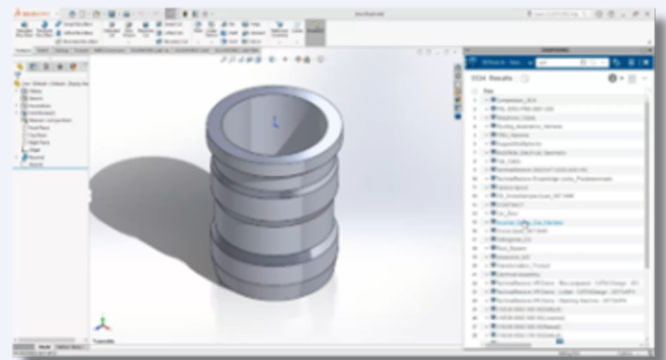

Connect CATIA V5 and Solidworks to the 3DEXPERIENCE® platform. Perform data and product lifecycle management from within your native environment to seamlessly manage all stages of product development.

Reveal your native design data to other design contributors, manage projects, assign tasks and collaborate more effectively. Discover and use additional applications for advanced design, simulation and manufacturing, that directly leverage your data without the need for translation.

CATIA V5 and Solidworks can leverage the PLM capabilities of the 3DEXPERIENCE® platform to accelerate product development while retaining CATIA V5 and Solidworks as the CAD-Master.

Collaborative Designer for CATIA V5 - UE5

Enables CATIA V5 designers to securely collaborate on the model definition across distributed design teams to develop the common product definition.

Collaborative Designer for CATIA V5 provides:

- Real-time, safe concurrent design across distributed teams using CATIA V5 as well as other CAD tools to build the full product definition.
- Leverage 3DEXPERIENCE® to converge CATIA V5 Designs along with other design models on products that require multisystem product definitions.
- Work in the full 3D context of a multiCAD product definition within CATIA V5.
- Share CATIA V5 designs with the extended enterprise using a browser available on any device from anywhere, any time.
- Optimizes the design work with an immersive development experience including tasks, issues, change management, maturity and revisions.

Collaborative Designer for SOLIDWORKS - UES

Access the power of the 3DEXPERIENCE cloud-based platform from within SOLIDWORKS for secure data and product lifecycle management.

With Collaborative Designer for SOLIDWORKS - you can:

- Search, explore, and select relevant design contexts your SOLIDWORKS applications.
- Benefit from simplified user interface for a concurrent design environment.
- Manage your product design data with seamless and integrated product lifecycle management.
- Leverage your design in downstream application and access a vast portfolio of applications on the 3DEXPERIENCE® platform.
